Professional Summary

Software Engineer and Full-Stack Developer with 3+ years of experience building, scaling, and operating production web applications. Proven in designing backend APIs, databases, and business logic while delivering performant, SEO-optimized user interfaces. Experienced in leading Agile development cycles, analyzing product and traffic metrics, and translating business requirements into reliable software systems that drive measurable operational and revenue impact.

Core Skills

- **Software Development & Programming:** Full-stack application development, API design, object-oriented programming, modular architecture, performance optimization
- **Web Development:** Next.js, React, NestJS, Prisma, TailwindCSS, Node.js, MongoDB, MySQL
- **Website Operations:** Content management, UX optimization, responsive design, conversion funnels
- **SEO / SEM:** On-page optimization, keyword strategy, Google Analytics, performance tracking
- **Cloud & DevOps:** AWS (EC2, S3, Lambda), Azure, Docker, Linux administration, CI/CD pipelines
- **Project Leadership:** Agile (Scrum, Kanban), cross-team collaboration, KPI reporting
- **Professional Skills:** Analytical thinking, adaptability, clear communication, time management

Professional Experience

Projects Lead Developer – Papat Properties (2023–Present)

- Accelerated digital service delivery across the business by architecting and deploying 10+ custom platforms, including transaction-critical property and insurance systems.

- Improved system reliability and end-user experience by owning production web operations, optimizing feature rollouts, and maintaining high-availability deployments.
- Increased engineering throughput and delivery consistency by leading Agile execution, enforcing code quality standards, and coordinating release cycles with KPI-driven reporting.
- Reduced operational friction and customer turnaround time by designing scalable APIs and backend workflows that automated core business processes.

Lead Developer – Projects Craft Hub (2023–2025)

- Expanded operational decision-making capability by architecting and delivering internal software for data analytics, project management, and reporting used across teams.
- Improved platform reliability and performance by owning the company website, internal dashboards, and production deployments end-to-end.
- Increased user engagement and discoverability by leading technical SEO and performance optimization initiatives across public-facing platforms.
- Standardized UX quality and brand consistency by collaborating with design and content teams to ship responsive, cross-device interfaces.

IT Support Attaché – National Housing Corporation (Jun–Aug 2024)

- Provided hands-on IT support for hardware, software, and networked systems in a production environment.
- Assisted in maintaining **enterprise databases and backend systems**, ensuring reliability and data integrity.
- Documented technical procedures, contributing to improved system continuity and support efficiency.

Key Projects

Property Management Platform v2.0 (*React, Node.js, PostgreSQL*)

- Built a full-featured **multi-tenant property management system** with rent tracking, maintenance workflows, and tenant–landlord communication.
- Designed REST APIs and database schemas to streamline billing, issue tracking, and reporting, significantly improving operational efficiency.

Property Management Platform v1.0 (*PHP, Laravel, MySQL*)

- Developed the **initial monolithic version** of the property management system to digitize tenant records, rent payments, and basic reporting.
- Served as the foundation for v2.0, informing later architectural improvements, modularization, and performance optimizations.

Traffic Control Simulator (AI) *(Python, SUMO, Reinforcement Learning)*

- Built a **traffic signal control simulator** using reinforcement learning to dynamically optimize signal timings.
- Trained and evaluated the model on a **simulated Nairobi CBD road network**, achieving an estimated **~21% reduction in average vehicle wait time** compared to fixed-time signals.

AI-Integrated POS System *(Laravel)*

- Implemented **AI-driven recommendation and predictive analytics modules** within a scalable POS backend.
- Increased cross-sell conversions by **22%** through data-driven product suggestions.

Scheduler Simulation *(Java)*

- Simulated core **operating system scheduling algorithms** (Round Robin, FIFO, SJF, uni-programming).
- Used priority queues and quantum counters to improve fairness and prevent starvation in concurrent workloads.

Education

Bachelor of Science in Computer Science – Maasai Mara University (2025)

Kenya Certificate of Secondary Education – Nyeri High School (2017 - 2020)

Certifications

- Software Engineering (2025)
- AI Career Essentials (2024),
- AWS Certified Cloud Practitioner (2024)
- Microsoft ASP.NET (2025)
- Cisco CCNA (ongoing)
